

AAQIB MUSTAFA

FULL STACK DEVELOPER

aaqibmustafaa@gmail.com | +92 300 5801212 | Islamabad, Pakistan | [linkedin.com/in/aaqibmustafa](https://www.linkedin.com/in/aaqibmustafa) | github.com/aaqibmustafa | aaqibmustafa.github.io

PROFILE

Full Stack Developer with 3+ years of experience designing and building scalable enterprise applications end-to-end using Laravel, PHP, and CodeIgniter on the backend, and JavaScript, HTML5, CSS3, Bootstrap, and Blade on the frontend. Skilled in architecting secure REST APIs with OAuth2, JWT, and RBAC, along with MySQL and MongoDB database design and optimization. Experienced across ERP, CRM, MRP, POS, and HRM systems, delivering responsive user interfaces integrated with backend services, AWS cloud infrastructure, CI/CD automation via GitHub Actions, and third-party API integrations including payment gateways and AI services.

EXPERIENCE

Full Stack Developer

HMB Softwares Pvt. Ltd.

Sep 2023 – Present

Islamabad, PK

- Develop enterprise applications end-to-end using Laravel, PHP, CodeIgniter, JavaScript, HTML5, CSS3, and Blade — covering both backend logic and frontend interfaces.
- Design and build responsive, user-facing interfaces and integrate them with backend services and REST APIs.
- Build secure REST APIs with OAuth2, JWT, RBAC, validation, and API versioning.
- Design MySQL and MongoDB databases with optimized queries and indexing.
- Integrate third-party APIs, payment gateways, AI services, AWS S3, and Amazon SES.
- Implement GitHub Actions CI/CD pipelines and automate application deployment.
- Collaborate with frontend, mobile, QA, and DevOps teams following Git workflows.

Junior PHP Developer

Code Studio Pvt. Ltd.

Nov 2022 – Aug 2023

Islamabad, PK

- Developed Laravel applications following MVC architecture.
- Built REST APIs and optimized database performance.
- Maintained applications using Git and collaborative development workflows.

EDUCATION

Bachelor of Science in Computer Science

Gomal University, Department of Computing & Information Technology

CGPA: 3.8/4.0 (Graduated with Distinction)

2018 – 2022

D.I.Khan, PK

SKILLS

Backend: PHP · Laravel · CodeIgniter · MySQL · REST APIs · MVC · MongoDB · RBAC

Frontend: JavaScript · HTML5 · CSS3 · Bootstrap · Blade · Responsive UI Development

Cloud & DevOps: AWS · Amazon S3 · Amazon SES · GitHub Actions · CI/CD · Deployment Automation

Tools: Git · GitHub · Postman · Insomnia

PROJECTS

MRP / ERP System

Built a unified Laravel-based ERP platform combining Inventory, POS, HRM, and Accounting into one system for a manufacturing client, with both backend logic and the interfaces used to manage it. Implemented multi-warehouse stock management with real-time low-stock alerts and automated stock transfers between locations. Designed a role-based MySQL architecture supporting multiple user roles and departments across the platform.

HealMindBody

Developed backend APIs and supporting web interfaces powering a wellness platform used across web, Android, and iOS, covering meditation, stress relief, and sleep tracking features. Built AI-driven logic to generate personalized meditation sessions based on real-time mood and user goals. Architected a dual-platform backend serving both the consumer mobile app and a separate B2B dashboard used by clinics and wellness businesses.

Cosmochat.ai

Built the Laravel backend for an AI-powered SaaS content platform supporting over 80 languages and 70+ content generation tools, including article writing, image generation, and a chat assistant. Implemented a credit-based subscription system with monthly, yearly, and prepaid billing tiers, along with usage tracking and payment processing. Integrated third-party AI services for content and image generation with rate limiting to manage usage per plan.

Hostel Management System

Built the complete backend and admin-facing web interface in CodeIgniter for a multi-tenant hostel management platform with both web and mobile API support. Developed an admin dashboard covering tenant management, room and bed allocation, bookings, and invoicing. Designed the MySQL schema from scratch with RBAC and API validation, and added a real-time analytics dashboard tracking occupancy, income, expenses, and pending payments.

Tamimi ATS — Corporate Website

Built a custom corporate website end-to-end in Laravel using Blade templating, covering company profile, project listings, and tenders. Set up a content management layer so admins could update projects and company information directly without needing code changes.
